DOWNLOAD THE MOBILE INETKEY APPLICATION

With the growing amount of mobile applications used on a daily basis, a need arose for a simple, effective Inetkey application that can be used on all devices and platforms - including Android, iOS, Blackberry and Windows.

After extensive testing on most available platforms, the official Inetkey app was launched on iOS, Android, Windows and Blackberry. You can download the appropriate version by clicking on the links below.

Non-official Inetkey mobile applications exist, but have been developed by independent individuals and are not supported or endorsed by Information Technology. Unofficial Inetkey apps carry the risk that they may intercept users' credentials, which could be abused or stolen. A user keys credentials into an app and does not know how or where they are stored or communicated, or even if it's secured.

We can accept no responsibility if users download these apps and experience problems.

FOR MORE INFORMATION ON INTERNET AND INETKEY, PLEASE CONSULT OUR [SERVICE CATALOGUE](#)
